

Edit Properties

Use **Properties|Edit Properties** to display and edit properties of the selected file/directory. For details refer to [Properties Compare](#).

Note

Internal SVN properties are displayed with grey font. It's not recommended to modify SVN properties directly through this dialog. It's better to use the other property-specific commands in the **Properties** menu.

You can **Add**, **Edit** and **Remove** individual properties. Use **Revert** on one or more properties to reset their **Current Value** to their **Base Value**.
